

# Illicit Discharge Detection and Elimination Program

An Illicit Discharge is the release of an undesirable pollutant into the Town's waterways

Illicit Discharges are harmful in that they can adversely affect the quality of the Town's waterways, making them unsafe for humans and wildlife

The Town is undertaking an Illicit Discharge Detection and Elimination (IDDE) Program to help identify and eliminate potentially harmful discharges into Town waterways

As a homeowner or the operator of a business within the Town you can help to minimize Illicit Discharges by being mindful of where materials from your site ultimately end up going

If there are any questions regarding Illicit Discharges, or if you think you may have noticed a potential Illicit Discharge, do not hesitate to contact the Town at (518) 283-2714 or email the Town Stormwater Management Officer at [Ewestfall@northgreenbush.org](mailto:Ewestfall@northgreenbush.org)

## Some Common IDDE Examples

Sewer Pipe Discharging to Storm Drain

Direct Discharge to Waterway

Spill Associated with Vehicle Accident

# Illicit Discharge Detection and Elimination Program

Cross-Connected Floor Drain

Dumping at Storm Drain Inlet

Outdoor Washing
